one little bit is missing: we need to set the inverse label of the relationship term to "corrected name" in the database.

I now changed label and text of the according term representation (1cbb3aac-afec-4770-bc59-006f20d65e0e) to "corrected name"

@Henning: Please review if the result in the dataportal is as expected and can you provide me with an example link?

Example:

<http://phycobank.org/100005>

correct: *Planothidium victorii*

to be corrected: *Planothidium victori*

The relation is clearly shown and the full dataset is only displayed under the correct name. This ticket can be closed.
