this needs to be discussed

Did I miss something?

Two points are important:

- 1) To avoid name duplicates
- 2) To prompt users to register the used name.

Normally, names without reference have been databased in the TaxEditor without a registration (species needed to register an infraspecific name).

The example, that a name without reference has been registered is a very rare case from the times this was not forbidden.

#4 - 04/03/2019 05:04 PM - Andreas Kohlbecker

- Priority changed from New to Highest

#5 - 04/03/2019 06:19 PM - Andreas Kohlbecker

- Status changed from Feedback to In Progress

We, Henning and Andreas decided on the following solution:

- the click on the *existing name* button will open the TaxonNamePopupEditor
- In the case when a name with missing nomenclatural reference is selected as existing name
 - The TaxonNamePopupEditor will show a notification like: "The chosen name needs to be completed before it can be used. Please add the nomenclatural reference and click on *continue* to proceed with entering the typifications for this name"
 - All fields in the TaxonNamePopupEditor will be set to readonly except for the nomenclatural reference and combination authors"
- In the other case the TaxonNamePopupEditor will be readonly and shows a notification like "You are about to create a registration for this existing name. Please click *continue* to proceed with entering the typifications for this name"

Editorial notes

The chosen name needs to be completed before it can be used. Please add the nomenclatural reference and click on "Save" to proceed with entering the typifications for this name.

Save Cancel

1. Selection of a existing reference is possible
2. Entering a reference detail is not permitted solution a) make the field editable solution b) workaround-> goto the reference, select the name, add the reference detail
3. Entering a new reference is partly allowed, add date, add title, add author team, add pages, DOI, Uri allowed. But not allowed: select reference type (blocker), add mandatory in reference (blocker).
4. Comment for users fine
