I have no problems selecting a genus as type name for a family:

Name type designation editor

registration **New name type designation**

Conserved type
 Rejected type
 Not designated

Type status

Type name

Typified names

Also from looking into the code I can't see that there is a rank dependent filter applied.

Can you please give an example of where you are having problems?

Example: <http://phycobank.org/102321> (worked perfectly)
 Currently no problems. Close this ticket and will only reopen, if problems arise.
