Description

DefinedTermDaoImpl implements

```
findByTitle(String queryString);
findByTitle(String queryString, CdmBase sessionObject);
```

which is declared in ITitledDao. The name suggests a search by title the implementation however does a search by label. All other findByTitle methods are implemented correctly.

This is fixed. Please review.

As the old method findByTitle which did override the same labeled parent method seems to be only called by test methods there seems to be no danger that this change created a regression as it is not API but dao.
