- File picture028-1.png added

I have some more problems for which I did not find mentioned in here:

ED Preferences

Name Details View
Publish Flag
Search
Search Dialogs
Specimens
Supplemental Data
Sources
UI
Distribution Data
Distribution Editor
Named area vocabularies
Status
Taxon Navigator

Status

List of preferences defining available status per area.
With the most right button you can edit the selected area specific status preference.
For defining new area specific status preference please use the button below the table

Predicate	Subject	Values	Override all	Delete	Status
distribution.status.term	Default	All status	<input checked="" type="checkbox"/>		

Status Selection

Restore Defaults Apply

Cancel OK

Click does not work most of the time

same functionality? Only left button works

?

Further Problem:

- when I set the subject to for example "Germany" I find no means to reset it to "Default" except of using the delete Button
- The function of the Delete button seems a bit strange: The Predicate is only set to Deleted. A general user would expect the whole thing to be vanished.

- Restore Default has no effect, what should happen when there are multiple properties?
- I found out that after using the Status Selection Button a new property is being created. Does this happen when the first entry is not the default one?
- Showing the predicate string makes not much sense since this is always the same.

#18 - 10/23/2019 02:45 PM - Andreas Müller

Andreas Kohlbecker wrote:

deleting the preference equals setting it to default

- The function of the Delete button seems a bit strange: The Predicate is only set to Deleted. A general user would expect the whole thing to be vanished.
- Restore Default has no effect, what should happen when there are multiple properties?

What do you mean by "properties"? Subjects? Preferences?

In general the semantics of "restore default" for a given page is that ALL data available on the page is set to default (which is similar to all relevant preferences are deleted). But I have not checked if it is implemented such.

- I found out that after using the Status Selection Button a new property is being created. Does this happen when the first entry is not the default one?
- Showing the predicate string makes not much sense since this is always the same.

true, at least if ONLY 1 predicate type is edited on the page, which is not always the case, but at least in the table it should always be the case. Therefore a good label could replace the predicate table (anyway the current string should be replaced by a good label)

#19 - 11/05/2019 01:57 PM - Katja Luther

- Target version changed from Release 5.11 to Release 5.12

#20 - 01/16/2020 01:13 PM - Katja Luther

- Target version changed from Release 5.12 to Release 5.13

#21 - 01/20/2020 02:52 PM - Andreas Müller

- Status changed from In Progress to Resolved

- Assignee changed from Katja Luther to Andreas Müller

- Target version changed from Release 5.13 to Release 5.10

- % Done changed from 0 to 50

putting back to 5.10 for review, no changes since then. Follow up ticket for open issues: [#8818](#).

During review put non-working/open issues to follow up ticket.

#22 - 01/20/2020 02:52 PM - Andreas Müller

- Copied to task #8818: Remaining issues for DB preferences added
