

EDIT - feature request #8688

Make OriginalSourceBase.cdmSource visible in TaxEditor

Severity:	major		
Description			
<p>The field OriginalSourceBase.cdmSource is usually filled during aggregations (for now). Therefore it does not need to be editable but the result should be visible to be able to distinguish and recognize sources.</p> <p>Possible open questions related: do we want to have a new subclass for OriginalSourceBase which only handles CdmLink-Sources. This subclass does not need to show all other fields (citation, id, namespace as these are probably never used). Or can we distinguish which fields to show simply by the result of (osb.cdmSource == null)? => moved to: #8778</p>

Current implementation shows the titleCache if it is an IdentifiableEntity. It shows the UUID if it is a CdmBase. Otherwise it calls object.toString().

The current solution shows titleCache+uuid for identifiable entities. This is too much. For now we need only the titleCache. Please remove uuid (it is needed only for non-identifiable entities).

Also there seems to be an extra empty line at the end which is not needed.

I can't test for CdmBase as there is no class implementing the ICdmSource interface yet which is not identifiable.

I tested for Taxon and it worked as expected.
