| Hallo,   |              |                        |           |
| zum Verbreitungseditor:  |              |                        |           |
| wenn man den Verbreitungseditor von einem höheren Taxon aus öffnet, erscheinen die untergeordneten Taxa nicht systematisch oder alphabetisch, sondern nach Rangstufen sortiert (erst Gattungen alphabetisch, dann Arten, dann Unterarten-siehe screenshot: erst erscheinen alle Arten, dann alle Unterarten). Das ist recht unübersichtlich. Gibt es die Möglichkeit, die Sortierung systematisch durchzuführen? |              |                        |           |
| mail AM:   |              |                        |           |
| Eckhard, soll die Sortierung hier bewusst abweichen können von der Sortierung, wie sie im Taxon Navigator verwendet wird, oder können wir quasi den gleichen Wert verwenden?   |              |                        |           |
| Katja, das wäre bezüglich Preferences dann eher ein Fall für unterschiedliche Subjects aber mit gleichem Prädikat.   |              |                        |           |
