Status:	New	Start date:	
Priority:	New	Due date:

Target version:	Release 5.46	Found in Version:	
Severity:	normal		
Description			
If a PKN has a feature and not a statement it is repeated multiple times for the child alternatives. A better layout is show the feature once and then have a line break and start with the statements of the alternatives.			
An example is here but probably this link will change in future:
