<b>Description</b>			
copied from <a href="#">#8867</a>			
The service should enrich the manifest with metadata stored within the images. Metadata for images is provided by the REST service <code>media/{uuid}/metadata</code> which causes the media file to be downloaded. This service should first of all check the server hosting the media object for metadata. The new image server at the BGBM should be able to deliver this information.

For the new BGBM image server ( <a href="https://robcast.github.io/digilib/">https://robcast.github.io/digilib/</a> ) <a href="#">digilib</a> is being used.
