

EDIT - feature request #8889

Remaining issues for distribution editor - continue

03/10/2020 09:28 AM - Katja Luther

Status:	In Progress	Start date:	
Priority:	New	Due date:	
Assignee:	Katja Luther	% Done:	0%
Category:	taxeditor	Estimated time:	0:00 hour
Target version:	Release 5.46		
Severity:	normal		
Description			
copied from #8047 :			
<ul style="list-style-type: none">• In preferences translate possible configuration terms "ID in Vocabulary" => "ID im Vokabular"• Multiple cell selection in table is currently possible. As there is no function related to this we should remove this feature for now.• Think about synchronization strategies for name editor and distribution editor• Documentation e.g. how to use only with keystrokes (#7854#note-80)• implement comparator which is related to the tree structure in the navigator, so children of a taxon come first though they have a lower rank, but best ordering should be configurable (let the user choose from the 3 typical ordering + the ordering described here — which has again 2 versions, alphabetic or rank + alphabetic) #7854#note-87 => implemented for 5.19• warning before opening if number of opened taxa is large (e.g. >200), this may take time• If no area is selected add a message to the white space beside the table to choose an area first. Or, alternatively, automatically open the area selection dialog or open a dialog that asks you if you want to open the area selection because no area is selected yet<ul style="list-style-type: none">◦ OR: area selection for distribution editor is not intuitive for non-filtered areas (#10148)• Check performance with large datasets (and related to this) #6159#note-9• Filtering for taxon names works only after leaving the cell, better would be after key stroke + delay• Filter: use same label as shown in the cells, currently it shows same value as in the dropbox of cells (also needs discussion if the cell label should also be shown (additionally) in the dropbox• ask whether children should be opened or not• context menu for columns does not work in distribution editor (#10147)• allow disable Synonyms column in distribution editor (#10146)• remember the size of the columns (see #8047#note-64)• sort status in drop down by default by shown representation, depending on the selection above in the preferences; currently default is idInVoc (see #8047#note-61)• correct handling of invalid numbers (see #8047#note-54)• make it possible to remember name used in source (#10423)
