Description

In PhycoBank there are Collections in Herbaria (c. 30%), but only c.2% Collection in Supercollections. I call a Collection in a herbarium a subcollection, it consists of preparations by one collector.

E.g. Coll. Lange-Bertalot in FR
i.e. Coll. Lange-Bertatot has its own numbers, but no collection code.
The TaxEDITOR fits to those expamples, Vaadin not. See: picture235-2.png

Coll. Lange-Bertalot would be "Name" (1) in picture 235-1
Super Collection = Senckenberg Forschungsinstitut und Naturmuseum with Herbarium Code FR

It is possible in Vaadin to put in the name as "institute" but this seems to be a kind of workaround.

Super Collection is (other example) Name= Alfred-Wegener-Institut für Polar- und Meeresforschung with Collection Code = BRM
