Example in Test-PhycoBank

Abas vulgaris

Given A. Kohlbecker has stored his samples at two places:
 "Coll. Kohlbecker in B", i.e. a subcollection in a herbarium (Screenshot 1)
 and a subcollection in an institution (Screenshot 2)
 "Coll. Kohlbecker in Institut für Biologie, Freie Universität Berlin"

The display in the portal is expected as given quoted.

The expected display in the search list might be:

Coll. Kohlbecker B - Botanic ... (Subcollection title plus hosting herbarium, Collection Code available)

Coll. Kohlecker Institut für Biologie Freie Universität Berlin (a simple concatenation would be the minimum needed.) No Collection Code for Uni and institute available, because of this the whole name is needed.

Currently only the institution is displayed in the Vaadin dropdown list. (Screenshot 3)
