Description

Entry from 1999 is missing the mandatory entry Kind of Unit = Specimen.

Action: Add Editorial note "PhycoBank (17 Sept 2020): The "isotype" from a different gathering should be interpreted as correctable error for "paratype". "

Try to select specimen: Can not be changed because the specimen is associated with multible type designations.

Try to save: The entered data in 1 field is incomplete...

This is a problem with imported data lacking information that was made mandatory after data import.

- Description updated

#2 - 09/21/2020 09:58 AM - Andreas Kohlbecker

- Status changed from New to Feedback

- Assignee changed from Andreas Kohlbecker to Wolf-Henning Kusber

- Target version changed from Unassigned CDM tickets to Release 5.18

Could you try fix the type designation in the Taxonomic Editor by adding the missing "Kind of Unit" information?

In TaxEDITor the addition was possible.
If this entry is split into Field Unit (FU) and Specimen (spec.) and the Specimen is set to "- Preserved Specimen" (1), why "Specimen" is not automatically part of the Specimen information and must be entered separately? (2) was entered 21 September 2020 and afterwards correctly displayed in Vaadin.

We may discuss this in the next meeting.

- Tracker changed from bug to task

- Status changed from Feedback to Worksforme

Kind of Unit can be added in Vaadin,

if (1) this is the first step before
(2) editing other parts and (3) saving the record (2020-09-22).

The bug report was written because the order (2)->(3) without (1) blockes saving.
