Target version:	Release 5.18			
Severity:	normal			

Description

The fields in json serializations produced by the TermBaseBeanProcessor can be reduced.

here an example of the current situation:

```
"kindOfUnit": {

    "uri": "",
    "class": "DefinedTerm",
    "updated": "2019-02-05T17:23:15.000+01:00",
    "created": "2019-02-05T17:23:15.000+01:00",
    "protectedTitleCache": false,
    "uuid": "87adcd8d-ce69-4d16-ac35-4e77fb698e00",
    "termType": "KindOfUnit",
    "titleCache": "Unpublished image",
    "representation_L10n": "Unpublished image",
    "representation_L10n_abbreviatedLabel": "",
    "representation_L10n_languageIso": "eng",
    "representation_L10n_languageUuid": "e9f8cdb7-6819-44e8-95d3-e2d0690c3523"
```

the following fields are to be excluded in TermBaseBeanProcessor:

- updated
- created
- protectedTitleCache
- titleCache (not needed since only the *_L10n should be used by clients)
- uri (should be retrieved via a separate request to the term service if needed)
