The tagged titles of TaxonName and TaxonBase do not include the nomenclatural reference

In the portal display of the nomenclatural reference is requested, though:

name parts definitions:

```
"referencePart": {
  "reference": true,
  "microreference": true
},
```

render template:

```
"referencePart": true,
```

Hence, the cdm_dataportal module needs to fetch the nomenclatural reference with citation detail separately.

These extra calls to the service could be avoided if the nomenclatural reference would be added to the tagged titles.

For having the nom ref in the tagged title you need to use the TaxonName.getTaggedFullTitle() method. This includes the nomenclatural source as tag of type TagEnum.reference . It does not distinguish the reference and the microreference as the microreference is somewhere in the middle of the reference. Is it needed to distinguish these 2?

Is it possible to use `TaxonName.getTaggedFullTitle()` or is this not possible for some reason.

By the way the above method also includes nom. status and original spelling information. (The later is still missing for accepted taxa in dataportals).

#3 - 07/15/2021 07:53 AM - Andreas Kohlbecker

- Status changed from *Feedback* to *In Progress*
- Priority changed from *Priority13* to *Priority14*
- Target version changed from *Release 5.25* to *Release 5.45*

ok, so we will modify the `cdmlib-remote` webservices first to make the reference with citation detail available for the dataportal.

#4 - 02/21/2022 04:19 PM - Andreas Müller

Still needs adaptation at some places
