Description			
copied from #9364			
In some databases there are many names with protected caches which may lead to problems when searching for names.			
<pre>SELECT tn.id, tn.titleCache, tn.nameCache, tn.protectedTitleCache, tn.protectedNameCache, tn.protectedFullTitleCache, tn.protectedAuthorshipCache , tn.* FROM TaxonName tn WHERE tn.protectednamecache = 1 OR tn.protectedtitlecache = 1 OR tn.protectedFullTitleCache = 1 OR tn.protectedAuthorshipCache ;</pre>			
Especially interesting might be those having an "&" in the protected nameCache which indicates that there is authorship in the nameCache which should not happen.			
Also many Teams have a protected nomenclatural title which is in most cases not necessary.			
<pre>SELECT ab.id, ab.DTYPE, ab.titleCache, ab.nomenclaturaltitle, ab.protectedtitlecache, ab.protectednomenclaturaltitlecache, ab.* FROM AgentBase ab WHERE -- ab.protectedtitlecache = 1 OR ab.protectednomenclaturaltitlecache = 1 ORDER BY ab.nomenclaturaltitle</pre>			
However, in most cases this is not critical.
