

EDIT - feature request #9748

Refactor identifiers

09/08/2021 03:08 PM - Andreas Müller

Status:	New	Start date:	
Priority:	New	Due date:	
Assignee:	Andreas Müller	% Done:	0%
Category:	cdm	Estimated time:	0:00 hour
Target version:	CDM UML 5.43		
Severity:	normal		
Description			
<p>Currently we have the Identifier class (Identifier string + type) and specific classes for DOI, ORCID, LSID etc used in CDM classes like Reference, Person, IdentifiableEntity.</p> <p>The aim is to unify all identifiers in 1 data structure. For this we need to extend the Identifier Type to become more something like "context" which allows semantic identification, syntax validation, parsing, formatting, etc.</p> <p>Existing specific IDs need to be transformed.</p> <p>UIs need to be adapted.</p> <p>see https://wiki.bgbm.org/bdinotes/index.php/BDI_315 for further discussion.</p>
