Tested with Descripta prima Dall. in Descriptive DS test.

Categorical as well as quantitative data worked as expected.

It works for sources loaded during the session but not yet for sources created during the session.

I created a new sources for a description and then went to the description element and could edit the source there. After reopening the taxon it worked as expected.

This was not a problem of a new source, but of more than one source, this problem is fixed.

Tested with nightly:

- Open Descripta secunda Gall. add a new source to the description "Distributions for Descripta secunda Gall." add a new source and switch to one of the distributions
- the source is shown and disabled.
- but still a problem if the section is collapsed before.
