Description

FieldUnit has a field primaryCollector of type Person. This seems not to be editalbe in the FieldUnit details view yet.

The field should only be editable if the main collector is a team.
If possible the selectable persons should be from the team members list only.

This is implemented with a selection dialog, maybe it would be easier to use with a drop down, filled with the team members. But as a first implementation it can be used.

... no, not yet ready. After entering a team and a primary collector for a field unit and then setting the focus to another record in the derivative tree and then going back to the field unit the primary collector is shown in the collector field and the primary collector field is empty. Also the formatting is not correct (as it is as if the primary collector is the only collector). Looks like things are stored at the wrong place.

This is fixed, please review.
