TypeDesignations appear mixed up in Registration Workingset Editor is fixed.

But the wording ...type vs. ...types depends from the number of entries in the Collection part.

One collection in name field or one Code or one institution = ...type (if one accession number).

One collection in name field AND and one Institution OR

One collection in name field AND and one Collection

AND one accession number = typeS

Comment: because Collection and Institution are repeatable fields too many combination of fields are possible to fill.

Comment 2: The expected display might include the institution of collection and/or Town of a subcollection. To be discussed.
